

Charles Darwin Esq. M.S.

with the author's kind regards.

(537) 13 Lamsa of considerable more typical of clays than matum Bavmex

13  
 p. 20. To these views, there appear  
 25 to me <sup>3</sup> objections, — 1st  
 35 the extraordinary diffusion of the  
 53 Hermitic force in many instances  
 62 which for centuries has not been —  
 64 2<sup>d</sup> the vis medicatrix — nails  
 produced on stumps in many  
 flesh prisms, which part blend with  
 gemination. 3<sup>d</sup> part of buds or  
 partaking of character of old tree, where  
 seeds go back & take new  
 characters. = 4<sup>th</sup> (p. 26 growth  
 & generation are hardly distinguishable

(537)

~~p. 13~~  
~~85 metamorphism of epizon (met)~~

Pangloss } to 5, 6, 7, 8

25-26 - Owen Belief  
90

64  
75 Tangieris - buds & ova alike

Remember the metamorphosis  
(growth or growth within) metamorphosis -  
blends into metamorphosis -  
as explanation for one must  
hold for others -
